VERIFIED PREVIEW NOTE

Displacement Pulse

Three-category total correction

The prior export shows 795.2M across 2015-2025 origin-year records.
That total also included 27.662M Other People in Need, although the definition names only refugees, asylum-seekers and IDPs.
The corrected three-category total is 767.508M across origin-years.
This is a sum of annual records, not a single-year population stock.
The dashboard pages after this notice are the prior visual export.

Corrected calculations are in the browsable Power BI project and documented in README.md.
Re-export from Power BI Desktop to replace the prior dashboard pages with updated visuals.

ANALYTICAL LENS

How displacement crises evolve

Each bubble is an origin-year. Position compares refugee and IDP populations; size shows total displacement.

TRANSPARENCY BY DESIGN

Methodology & Sources

A trusted analytical product should be as rigorous as it is beautiful.

UNHCR DATA

2015–2025

WHAT THIS DASHBOARD ANSWERS:

Which origins account for the largest displaced populations?
How has the mix of refugees, asylum-seekers, and IDPs changed?
Which crises are primarily internal versus cross-border?
Where did displacement rise or fall most recently?

DATA FOUNDATION:

Source: UNHCR Refugee Population Statistics API
Grain: origin × year
Coverage: 20 leading origins, 2015–2025
Rows: 220 origin-year observations
Indicators: refugees, asylum-seekers, IDPs, other people in need

METRIC DEFINITIONS:

Refugees: people recognized under UNHCR mandate.
Asylum-seekers: people with pending protection claims.
IDPs: people displaced within their country.
Total displaced: refugees + asylum-seekers + IDPs + other people in need.

INTERPRETATION GUARDRAILS:

UNHCR figures can be provisional and revised.
Reporting completeness varies by country and population type.
The dashboard covers the 20 largest origins in 2025, not the full global population.
Displayed totals sum four selected categories and do not replace UNHCR's reconciled global headline.
